# East Alameda County Regional Conservation Strategy: A Blueprint for Action

Users Advisory Group

December 11, 2008

# Meeting Objectives

- Debrief October 16<sup>th</sup> UAG tour
- Review Phase 1 work products
- Discuss draft habitat models
- Discuss document outline
- EBRPD & PLCS mitigation presentations

Questions about accomplishments so far...

#### Phase 1

- Focal species selection criteria
- Focal species list
- Public open space classification criteria
- Public open space map
- Land use classification and map
- Land cover mapping process
- Land cover map

# Habitat Modeling

# Focal Species Habitat Modeling

- Models give a better indication of where species <u>could</u> occur based on habitat characteristics
- Will highlight areas where mitigation could occur for given species
- Determine when species surveys are needed
- Gives context to the regulatory agencies when they are reviewing a project

# Focal Species Habitat Modeling

Use known life history information and available biotic and abiotic information to help determine potential distribution:

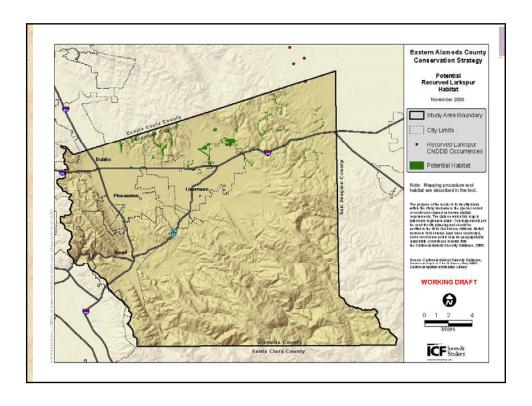

- Land-cover types
- Soils

- Elevation or slope characteristics
- Known dispersal or movement distances for wildlife
- Specific habitat features (e.g., aquatic habitat)
- Any other life history requirements that can be replicated in GIS
- Use known occurrences to check potential distribution for accuracy.

# Delphinium recurvatum-Recurved larkspur

#### Habitat parameters

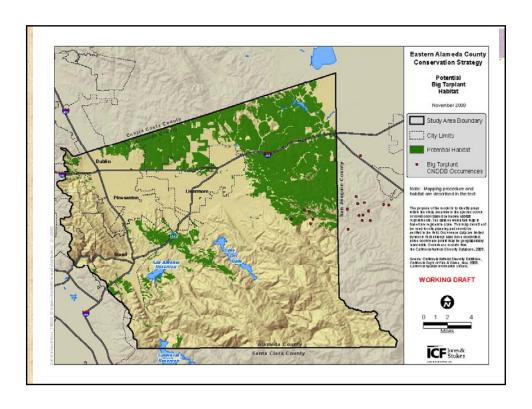

Sandy or clay alkaline soils in California annual grassland or valley sink scrub from 100 - 2000'.

# Blepharizonia plumosa Big tarplant

#### Habitat parameters

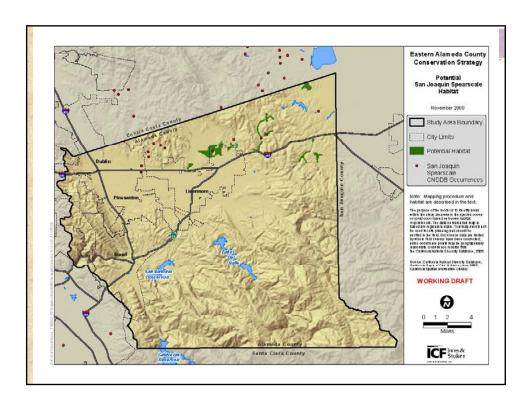

All California annual grassland up to 3609 feet on clay or clay loam soils.

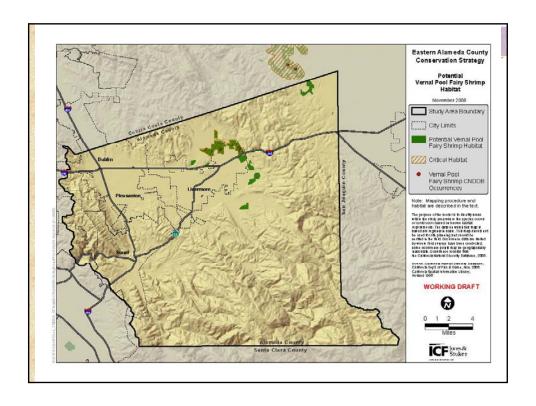

# Atriplex joaquiniana – San Joaquin spearscale

#### Habitat parameters

All alkali meadow and scalds, alkali wetland, valley sink scrub between 0-1055 feet.

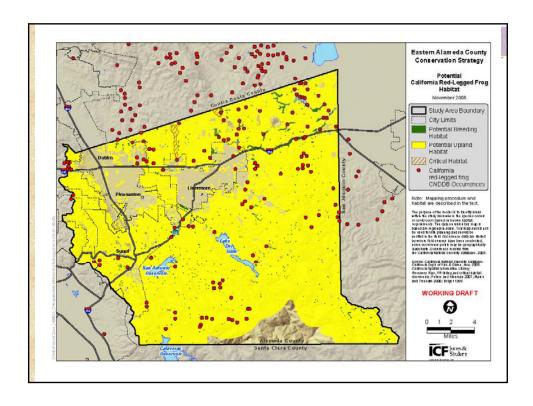

# California red-legged frog

#### **Breeding Habitat**

Perennial freshwater marsh, seasonal wetland, alkali wetland, pond (including stock ponds), streams, + 150' buffer from those features.

#### Upland Habitat – movement

Two-mile buffer around breeding habitat in all land cover types except for: urban, rural residential, landfill, aqueduct.

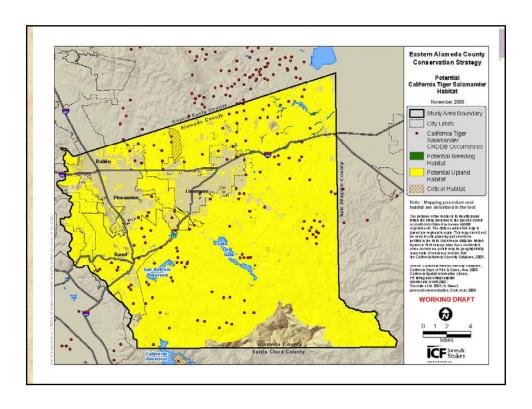

# California tiger salamander

#### **Breeding Habitat**

Perennial freshwater marsh, seasonal wetland, alkali wetland, ponds (including stock ponds) between 0-4,500 ft.

#### <u>Upland Habitat – movement & non-breeding</u>

1.6-mile buffer around breeding habitat in all land cover types except for: urban, rural residential, landfill, aqueduct.

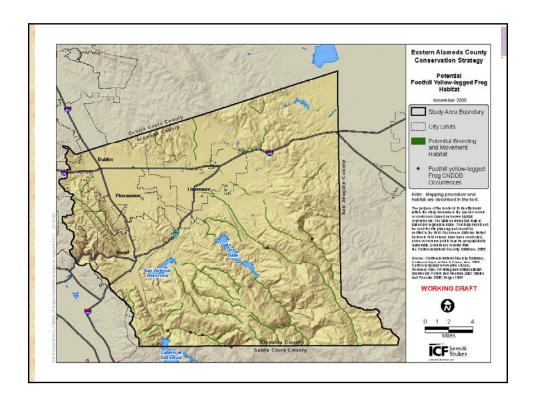

# Foothill yellow-legged frog

#### Breeding and Foraging Habitat – year round

All perennial rivers and streams in all land cover types except urban, rural residential, landfill.

#### <u>Upland Habitat – movement & refuge</u>

Buffer all breeding habitat by 165ft.

# Alameda whipsnake

#### Core Habitat – breeding and foraging

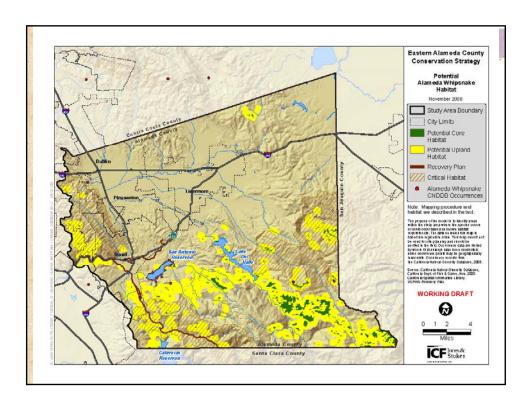

Rock outcrop, Northern Mixed Chaparral/Chamise Chaparral, Mixed serpentine chaparral, northern coastal scrub/Diablan sage scrub.

#### Movement/Dispersal Habitat

All grassland, oak woodland, riparian forest & scrub land cover types within 300 meters (984 feet) of core habitat.

All of Alameda and Vallecitos Creeks; esp. Alameda Creek

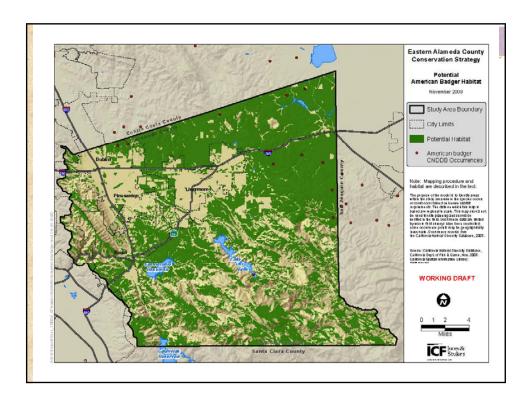

All of Alameda and Vallecitos Creeks; esp. Alameda Creek where it crosses under I-680; and Vallecitos Creek linking Pleasanton Ridge and San Antonio Reservoir +300 m buffer (discussed in the Recovery Plan).

# American Badger

#### Denning/Movement Habitat

California annual grassland, serpentine bunchgrass grassland, alkali meadow and scalds, valley oak woodland, developed agriculture, cropland, ruderal, rural residential.

# San Joaquin kit fox

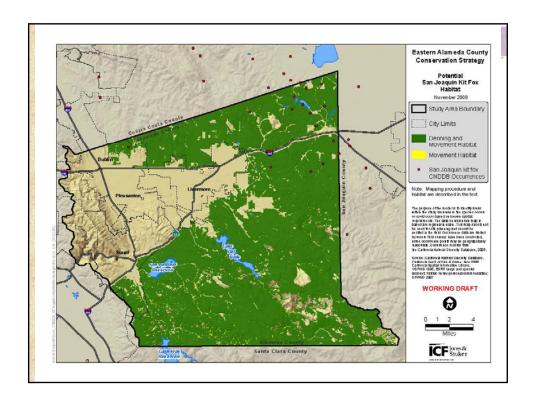

#### Foraging and Movement Habitat

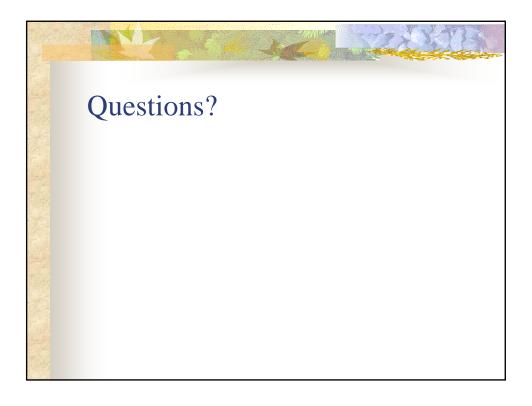

All grassland, oak woodland, developed agriculture, cropland, ruderal, rural- residential; Not in urban/suburban cover type.

Added a 200 m buffer around major highways due to noise and traffic danger (Gerrard et al.).

#### **Denning Habitat**

Habitat as described above, but with slope less than 40 degrees (Reese et al. 1992)

# Draft Document Outline Chapter 1 – Introduction Chapter 2 – Environmental Setting Chapter 3 – Conservation Strategy Chapter 4 – Implementation Chapter 5 – Literature Cited
